

# Learn more about BioWin, a key collaborator for HealthTech For Care to reinforce the European positioning of HealthTech Innovation Days

## About BioWin

BioWin is the Health Cluster of Wallonia, Belgium, the regional reference holder for all stakeholders in health biotech and medtech research and innovation projects. As a competitiveness cluster we bring together all the innovation system players in the field of health (biopharma and medtech) in Wallonia, with the goal of stimulating regional economic redeployment.

Wallonia's biopharma and medtech industries are major contributors to the Walloon economy and employment sector. The pharmaceutical industry is the main added-value industrial activity in Wallonia, the main driver for economic growth in the Region and is responsible for 27% of Wallonia's total export.

It is our mission to accelerate innovation to meet tomorrow's public health challenges, as well as to develop the knowledge, employment and competitiveness of all players in the health sector ecosystem in Wallonia.

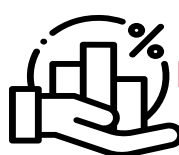

Our vibrant and robust ecosystem is attracting the interest of sophisticated investors from all over the world. According to our calculations the year 2020 was a record year as regards to fundraising and has never been as substantial. Our Walloon SME's active in life sciences have raised 900 million € in total despite the COVID-19 pandemic.

### Why did BioWin decide to collaborate with HealthTech For Care?

We feel it is extremely important to collaborate with the European health ecosystem and actively participate in our common goal of accelerating patient access to medical innovations.

Through this partnership with HealthTech For Care, BioWin intends to consolidate its strategy and strengthen the European reach of this initiative. This partnership is at the heart of BioWin's mission to accelerate innovation to meet the public health challenges of tomorrow.

### What are the benefits for BioWin members to participate in HTID3?

The corona crisis learned us that research and development for our health as well as pan-European collaborations are needed to accelerate innovation and access to patients. In order to succeed and to support these cutting-edge technologies, the commercialization as well as the scale-up of these innovations our members could benefit from the support programme of the European Commission. Thanks to this initiative our members will be able to get access to European funding and take advantage of being part of a powerful international network.
